

# Eclipse Supports Macrovision's SafeDisc 2.0 Copy Encryption

February 20, 2001

The Macrovision SafeDisc 2.0 encryption module provides manufacturers the ability to analyze discs and verify Macrovision's newest CD copy-protection technology. In addition, the module permits manufacturers to verify copy-protected replicas to the master without complicated or expensive hardware tools. The optional Eclipse SafeDisc plug-in runs automatically with ImageAnalysis and ImageVerify to compare SafeDisc masters and replicas.

The Eclipse SafeDisc plug-in examines the CD and if SafeDisc 2.0 is detected, it reports whether it is a master or a replica. It then assembles a list of instructions detailing how the CD has to be analyzed or compared to another image. These instructions are then passed to ImageAnalysis and ImageVerify, so it knows how to navigate the signature areas on the replicate. This approach allows you to compare hard drive images to SafeDisc 2.0 masters or replicas without special handling.

Eclipse has built a reputation for technical excellence and world-class customer support with its line of mastering, premastering and QC verification tools for the DVD and CD manufacturing industry.
