

Eclipse ImageAnalysis Software Supports Mount Rainier Developers

February 12, 2002

M3/REPLITECH – Los Angeles, California – Eclipse released a special version of its popular ImageAnalysis Software program to support the development of Mount Rainier products. Eclipse was chosen by Philips to develop a sophisticated analysis tool for drive and software developers to use in the development and qualification of Mount Rainier products. Eclipse ImageAnalysis is a software-based media and format analyzer used extensively in mastering and QC environments for analyzing DVD and CD discs.

ImageAnalysis can be used to analyze Mount Rainier written CDs to verify drive and software compliance to specification. ImageAnalysis includes more than thirty new rules specific to the Mount Rainier format. These have been added to the already existing 400 plus rules used for analyzing DVD and CD discs to Book and format specification. In addition, a new Command Dump feature has been added to assist developers in analyzing the SCSI command communications for the drive when implementing the Multimedia Command Sets with the Mount Rainier extensions.

About Eclipse:

Eclipse, recognized as the new leader in DVD and CD mastering encoders and software provides leading edge capability with a reputation for technical excellence and world-class customer support in its line of mastering, mastering and QC verification tools. Eclipse is the recipient of three TapeDisc Business Magazine Technical Excellence Awards for 2002. The awards were presented for excellence and innovation for its EclipseSuite Software, ImageEncoder Mastering System and EclipseSuite CSS Verification Plug-In products.
