

## Media Morphics Signs Eclipse Distributor Agreement

January 1998

Media Morphics of Eindhoven, The Netherlands, and Eclipse Data Technologies of Pleasanton, CA USA, signed a distributor agreement.

Eclipse is the producer of the EclipseSuite CD & DVD pre-mastering and verification products that the marketplace by storm since their introduction last year. Media Morphics is the world wide supplier of high performance conversion and CD and DVD encoding equipment for laser beam recorders.

According to Ruud Broers, Product Manager of Media Morphics, it was a logical choice to add verification tools from an independent company to Media Morphics' product range. "Encoding and verification software were developed independent of each other, so the likelihood of both products containing the same errors is very slim. Furthermore the Eclipse package is a perfect match with the Cytris conversion system hardware by Media Morphics." The Eclipse package is available to all Media Morphics customers and is already used by Media Morphics' helpdesk to assist in analyzing mastering and pre-mastering problems."

"People really appreciate our user-friendly interface and embedded analysis features of the ImageAnalysis and Verify software." states Kevin McDonnell, President of Eclipse. "Teaming up with Media Morphics further strengthens our presence in mastering sites world-wide."

*Media Morphics, a member of Toolex International NV, is dedicated to providing the technology and equipment for pre-mastering processes for all media formats, including DVD and CD-R.*
