Eclipse Makes Image Archiving Easy

March 12, 2004

Pleasanton, California: Eclipse announced the release and immediate availability of a new plug -in module for Eclipse ImageCopy customers. ImageArchive offers the convenience of automatically storing DDP and CMF masters to high-speed recordable DVD media. ImageArchive is a seamlessly integrated module, using ImageCopy's proprietary format analysis engine for analyzing and copying masters received electronically to physical media. ImageArchive avoids adding additional steps to existing premastering processes, while providing a cost savings by allowing the storage of masters on inexpensive recordable discs instead of the more expensive DLT or other tape media. When ImageIntegrity is included, its advanced checksums ensure the integrity of the image throughout the process, critical when an original customer master is not available.

ImageArchive is available as an option to all ImageCopy customers. EclipseSuite software applications have become the standard of the industry for analyzing, copying and verifying DVD and CD masters because of its user-friendly interface and ability to perform sophisticated processes without the need for proprietary equipment. Eclipse products provide content authors and premastering departments with a quality software tool for analyzing, repairing and verifying DVD and CD masters.

About Eclipse:

Eclipse, recognized as the new leader in DVD and CD mastering encoders and software provides leading edge capability with a reputation for technical excellence and world-class customer support in its line of mastering, premastering and QC verification tools.
